Geocentric Datum of Australia

This map shows the location of mines operating at the end of 2020, developing mines and mines under care and maintenance in Australia. Developing mines are deposits where mine site development has commenced or where all approvals for mining have been received by the end of 2020. Mines under care and maintenance are deposits where mining has stopped and there is a remaining Joint Ore Reserve Committee (JORC) compliant Resource that may be mined or developed in the future.

Mines are shown as small symbols coloured by commodity type. The mine information is superimposed on a generalised surface geology map of Australia. The coloured areas represent rocks of different ages (see legend below) outcropping at the surface of the Earth. The greyscale background image on which the geology is superimposed represents the aeromagnetic response (0.5 vertical derivative of total magnetic intensity) of rocks at surface and at depth. In areas of younger basin and regolith cover (grey areas) the aeromagnetics shows the older geology continuing under this cover. In some areas these buried rocks are prospective for undiscovered mineral deposits.

Commodity type	Mine status
● Base metals - Cu (Zn, Pb, Ag, Au)	○ Operating mine
● Base metals - Cu, Au, U	○ Developing mine
● Base metals - Zn, Pb (Cu, Ag)	□ Care and maintenance mine
● Battery/alloy metals - Ni, Co, Mn, V, Mo, Mg	
● Bauxite	
● Coal	
● Diamond	
● Fertiliser elements - P, K	
● Graphite	
● Heavy mineral sands	
● Iron ore	
● Lithium	
● Other metals - Sn, W, Ta	
● Precious metals - Au, Ag	
● Rare earth elements	
● Uranium
